PROFESSIONAL SUMMARY

Pre-final year CSE (AI-ML) student at Poornima University specializing in GenAI agent systems and applied machine learning. Built a multi-step LLM testing agent with LangGraph and Google Gemini; trained supervised classification and regression models on 15,000+ real-world geological data points at ONGC (87% accuracy). Proficient in Transformers, Hugging Face, RAG pipelines, neural networks, and ML deployment. Seeking ML / GenAI / Data Science Engineering Intern roles.

TECHNICAL SKILLS

- **GenAI & LLMs:** LangChain, LangGraph, Google Gemini, Hugging Face, Transformers, RAG, FAISS, prompt engineering, AI agent workflows
- **Machine Learning:** Scikit-learn, PyTorch, TensorFlow, classification, regression, neural networks, feature engineering, fine-tuning, cross-validation, hyperparameter tuning
- **MLOps & Deployment:** MLflow (experiment tracking), FastAPI, Docker, AWS (EC2, S3, IAM), Git, GitHub
- **Data & Analytics:** Python, SQL, Pandas, NumPy, EDA, Matplotlib
- **Databases:** MongoDB, ChromaDB, FAISS (vector search)

WORK EXPERIENCE

AI Engineering Intern | Infosys Springboard

Dec 2025 – Present (Remote)

- Designed and tested LLM prompt pipelines for domain-specific summarization and automation using generative AI models; explored RAG architectures and vector retrieval for context-grounded responses.
- Built reproducible experimentation notebooks to benchmark prompt performance, output quality, and response consistency; documented findings for team-wide adoption.
- Investigated production deployment strategies: inference latency reduction, API cost optimization, and scalability for high-throughput LLM systems.

Applied ML Intern | Edunet Foundation (AICTE) - IBM SkillsBuild

Jan 2026 – Present (Remote)

- Developed end-to-end ML workflows covering classification, regression, feature engineering, cross-validation, and performance benchmarking using Python, Scikit-learn, and MLflow experiment tracking.
- Built and evaluated neural network models; implemented structured dataset splitting and reproducible experimentation practices across multiple ML tasks.

Machine Learning Intern | ONGC, Dehradun

Jun 2025 – Aug 2025

- Built Random Forest and XGBoost classification models for lithology prediction on 15,000+ geological data points (GR, RHOB, NPHI, DEPTH), achieving 87% accuracy via feature engineering and hyperparameter tuning.
- Implemented K-Means clustering for electro-facies identification, improving reservoir zone interpretation efficiency by 25%; designed preprocessing pipelines for large-scale well log datasets.

PROJECTS

AI-Powered Automated Testing Agent | [GitHub](#)

LangGraph • Google Gemini • Playwright • Python

- Built a GenAI agent that converts natural language test cases into executable Playwright scripts using multi-step LLM reasoning; reduced manual QA scripting time by 40%.

Lecture Video to Notes Generator | [GitHub](#)

Whisper • LangChain • Hugging Face Transformers • Python

- Built a Whisper-based speech-to-text pipeline integrated with Transformer-based LLM summarization to auto-generate lecture notes, quizzes, and flashcards from video recordings.

Job-Matched Custom Email Generator | [GitHub](#)

LangChain • Google Gemini • FastAPI • Prompt Engineering

- Developed an LLM system that extracts job requirements from a posting URL and generates tailored application emails aligned to a candidate's skill profile; served via FastAPI endpoint.

EDUCATION

B.Tech – CSE (AI-ML Specialization) | Poornima University, Jaipur

Aug 2023 – Apr 2027 (Expected)

CGPA: 8.00 | Pre-Final Year, Semester 6 | Coursework: ML, Deep Learning, NLP, DSA, Probability & Statistics, DBMS

CERTIFICATIONS

- SAS – Statistics and Machine Learning | Statistical modeling, regression, and predictive analytics using SAS Viya.
- Infosys Springboard – AI Primer | ML, deep learning, NLP, computer vision, GenAI, and prompt engineering.
- NPTEL – Cloud, IoT & Edge ML | Distributed AI systems, MQTT/Kafka pipelines, containerized model deployment.
